Environmental Monitoring and Assessment Program

ID	Name	Container Type	Container Color	Container Size	Unit	Temperature Preservation	Chemical/Preservation
CONT-000	Not applicable						
CONT-001	Water-Chla, nutrient, TSS-West	Polystyrene Petri Dish	Opaque			Frozen (-20 deg C)	No chemical preservation. Chlorophyll: filters placed in aluminum foil inside a Petri dish or Whirl-Pac and kept frozen until analysis. Nutrients: narrow mouth 60 ml Nalgene HDPE bottles with leak proof screw cap frozen upright and kept frozen until analysis. Total suspended solids: samples stored in 1 L polypropylene bottles on wet ice in the field and stored at 4 deg C to await laboratory processing within 7 days.
CONT-003	Water, TSS-general	Polypropylene Bottle	Clear	1.00	l	Wet Ice (4 deg C)	No chemical preservation. Samples are held in a 1-L polypropylene bottles on wet ice in the field and stored at 4 C to await laboratory processing within 7 days.
CONT-010	Biota, Histopathology Fish	Polyethylene Container	Clear	1.00	gal	None	The abdominal and thoracic cavity are opened, fish is labed to station and placed in a perforated plastic bag such that the fish will be totally immersed in Dietrich's fixative. Multiple samples may be held in a single container, avoid overcrowding.
CONT-011	Biota, Chemistry Fish	Aluminum Foil Wrap	Opaque			Wet Ice (4 deg C)	No chemical preservation. Fish chemistry samples are held on wet ice in the field until they are transferred to shore where are frozen to await laboratory analysis.
CONT-012	Biota, Macrobenthic-West	Nalgene Bottle	Clear	1000.00	ml	None	Samples were stored in 500 or 1000 cc wide-mouthed Nalgene bottles and were preserved with buffered formalin (final concentration of 10% formalin with Rose Bengal added). Samples were transferred
